

CS 428: Fall 2010

Introduction to Computer Graphics

Introduction and Overview

First things first...

- **3 (+1)** slots left in CS 428 (as of 8/31/2010)
- Write me by 11:59pm today. subject: **CS428**
 - Your full name
 - Why you want to take this course in **max** three sentences
 - Grades for the CS 428 prerequisites
 - Calculus 2, Linear algebra, Java
- **Keep it short!**
- Will inform you on accept/reject by Friday

People

- **Instructor: Prof. Andrew Nealen**
 - CBIM (Bowser road, near student center)
Room 21, nealen@cs.rutgers.edu
 - **Office hours:** Wednesday 5-7pm,
 - Best to contact me by email, or office hours
- **TA: Peter Borosan**
 - CBIM lab and Hill 250, 252 for office hours
 - Office hours: TBA (Peter will be back on 9/13)
 - pborosan@cs.rutgers.edu

Web

- **Website (external access)**
 - `http://tinyurl.com/cs428-fall2010`
- **Everything else: Sakai**
 - You should be able to see the “CS 428 Fall 2010” tab after logging in to `https://sakai.rutgers.edu/portal` with your RutgersID
 - Mailing list:
`cs428-fall2010@sakai.rutgers.edu`

What's required?

- Programming (Java, JOGL 1.0.0, JOGL 1.1.0)
- Math
 - linear algebra, some numerical computation
- Time commitment
 - This course is **very** work/code intense
 - You need to be aware of this!
 - How many other courses are you taking?

Textbook

Computer Graphics with OpenGL, 3rd edition

Donald Hearn and M. Pauline Baker,
Prentice Hall, 2004

Academic Integrity

- Read the web page!

`http://academicintegrity.rutgers.edu/integrity.shtml`

- But basically:

- You need to do your own thinking, writing, and programming
- You *should* discuss the course material with other people in the class, but you cannot give away how to do the homework(s) or projects

Computer accounts

- We'll mainly be using Hill 248, 250 and 252 (**iLab** a.k.a. the “cereal” named machines)
- Available on the course website
 - How to set up an account
 - How to get JOGL up and running
 - More...
- Access to the lab with your Rutgers ID
- `http://www.cs.rutgers.edu/resources/rooms_and_equipment/status/rooms.php`

Programming projects

Grading

- Projects 60%
- Midterm 20%
- Final 20%

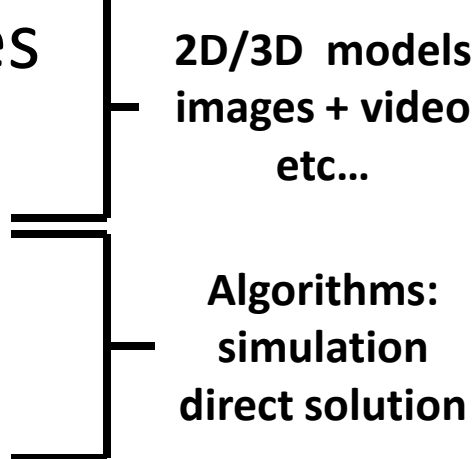

Late policy:

- tell me about problems in advance
- 50% credit for one day late (and no extra credit)
- 0% credit for 2+ days late

What this course is about

- Representations, computational models, and algorithms in computer graphics
- Using OpenGL on modern (programmable) graphics hardware

Representation + comp. models

- Shapes + materials + appearances
 - Motions + behaviors
 - **Representations:** specifications
 - **Comp. models:** realizations
 - Structure of problems
 - Spatial/temporal coherence. Sparsity.
 - Optimization
 - Approximation. Pre-computation.
- 
- 2D/3D models
images + video
etc...
- Algorithms:
simulation
direct solution

Topic overview

- Image formation and OpenGL
- Transformations and viewing
- Polygons and polygon meshes
 - Programmable pipelines
- Modeling and animation
- Rendering

Topic overview

- **Image formation and OpenGL**
 - Modeling the image formation process
 - OpenGL primitives, OpenGL state machine
- Transformations and viewing
- Polygons and polygon meshes
 - Programmable pipelines
- Modeling and animation
- Rendering

Topic overview

- Image formation and OpenGL
- **Transformations and viewing**
 - Linear algebra review, Homogeneous coordinates
 - Geometric + projective transformations
 - Viewing, Viewports, Clipping
- Polygons and polygon meshes
 - Programmable pipelines
- Modeling and animation
- Rendering

Topic overview

- Image formation and OpenGL
- Transformations and viewing
- **Polygons and polygon meshes**
 - **3D model/mesh representations**
 - **Piecewise linear shape approximations**
 - **Illumination and polygon shading**
- Modeling and animation
- Rendering

Topic overview

- Image formation and OpenGL
- Transformations and viewing
- Polygons and polygon meshes
 - Programmable pipelines
- **Modeling and animation**
 - **Procedural modeling and animation**
- Rendering

Topic overview

- Image formation and OpenGL
- Transformations and viewing
- Polygons and polygon meshes
 - Programmable pipelines
- Modeling and animation
- **Rendering**
 - **OpenGL rasterization: hidden surface removal, interpolation, texturing (some sampling theory)**
 - **Raytracing and radiosity**

3D graphics programming

High-level view

Modeling

Rendering

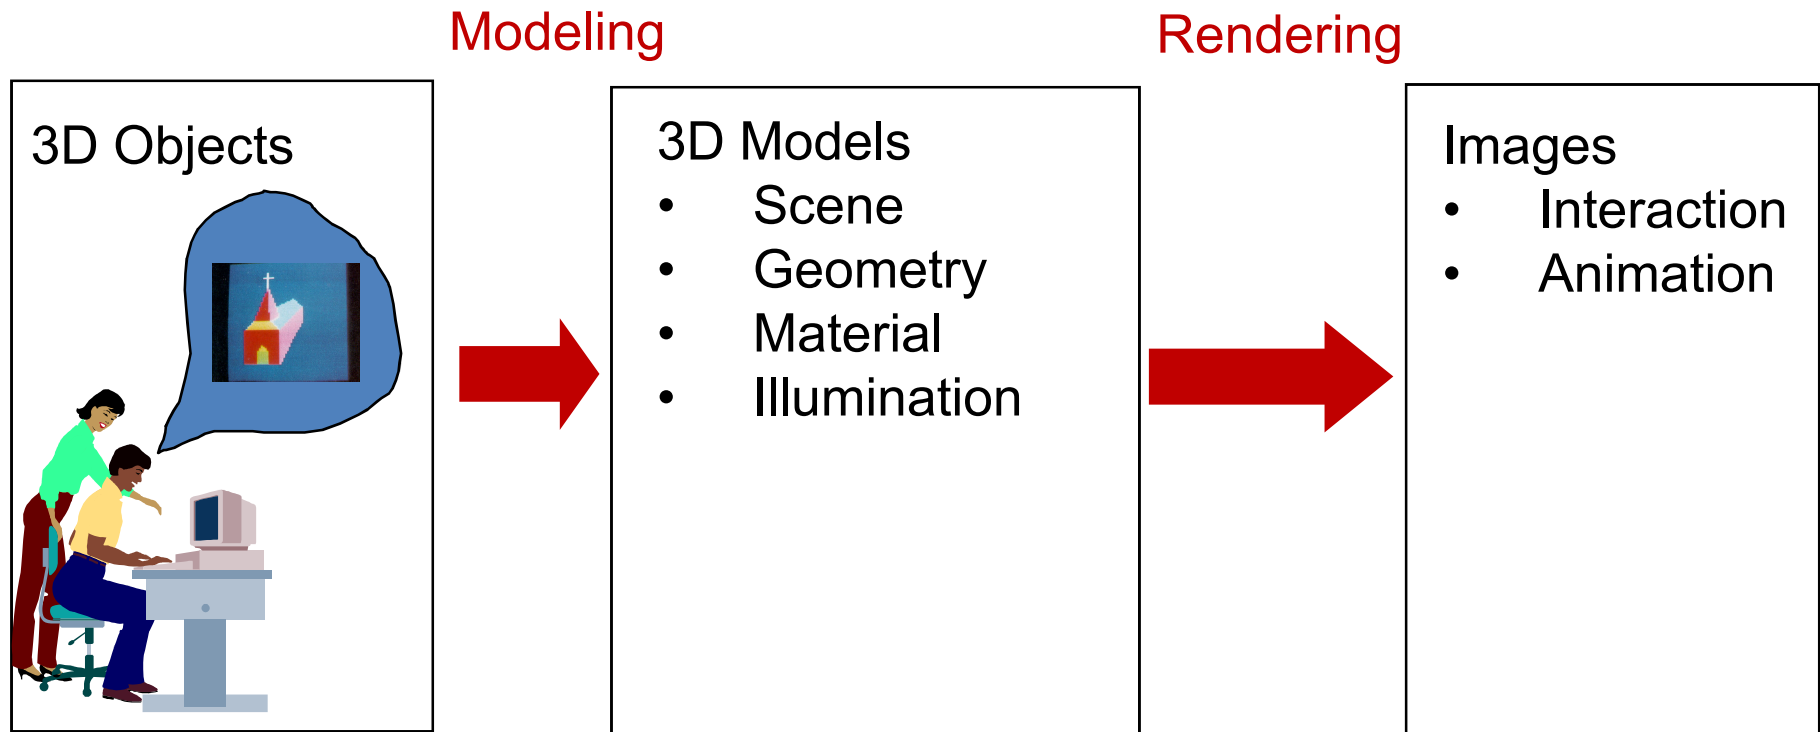

approx. 25 Triangles

approx. 50 x 100 Pixels

3D graphics programming

High-level view

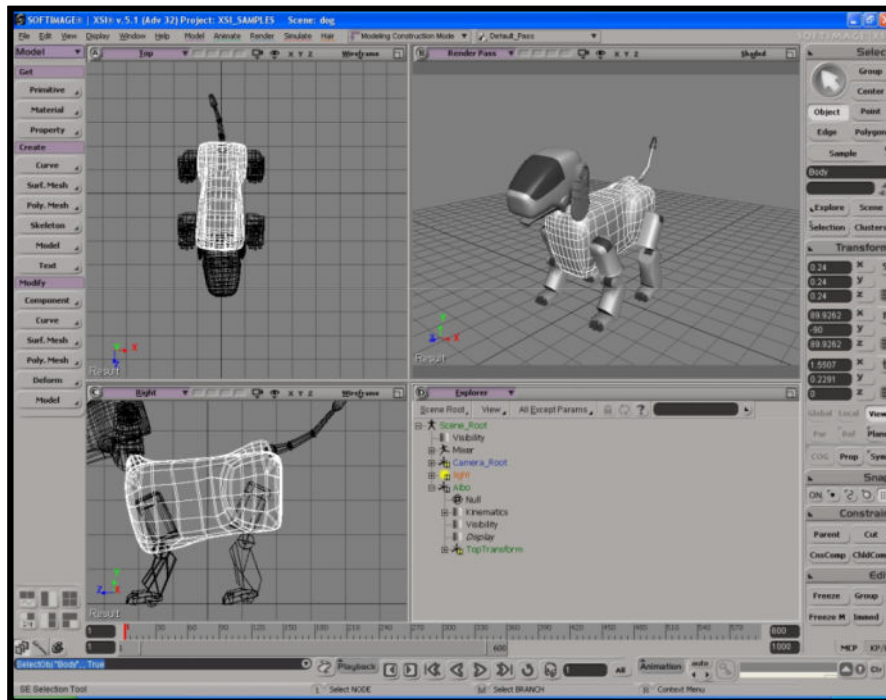

Making images in CG

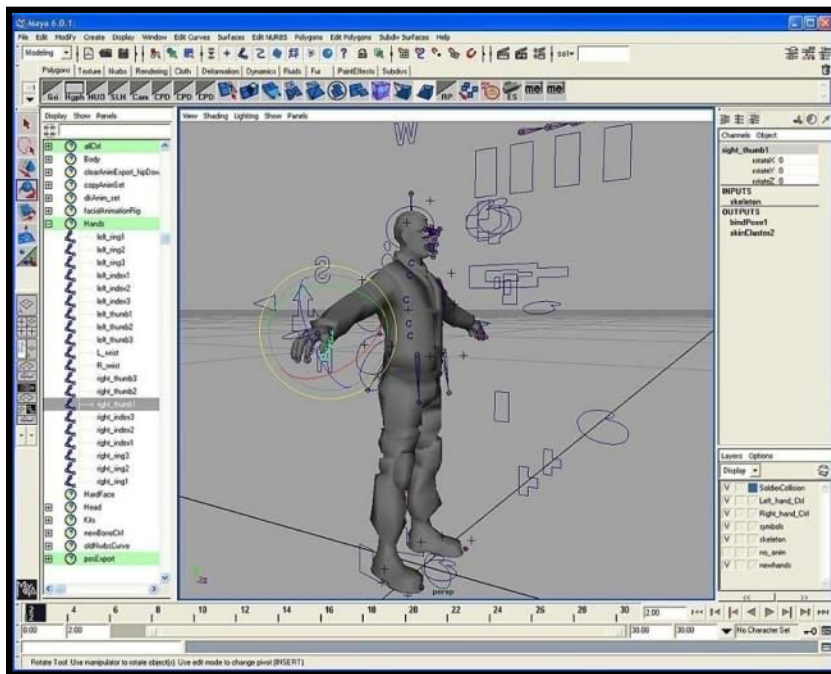

Appearance

Shape

Motion

Movies

Tron (1982)

Movies

Luxo Jr. (1986)

Movies

The Matrix Revolutions (2003)

Movies

King Kong (2005)

Movies

Ratatouille (2007)

Movies

Wall-E (2008)

Video games

Team Fortress 2 (2007)

Video games

Resident Evil 5 (2009)

Video games

Spore (2008)
